F-601**[SPECIFICATIONS]**

Refer to Instruction Manual for basic operation of F-601 camera.

Major features

- (1) Built-in high-performance autofocus detection system based on a phase difference detection method.
- (2) Advanced focus tracking
- (3) Built-in speedlight
- (4) Easy operation with command input control dial and LCD panel indicator. Centralized LCD panel indicators on the camera's top plate and LCD viewfinder indicators.
- (5) Matrix metering and matrix balanced fill-flash
- (6) Spot metering capability
- (7) Full 5 exposure modes: Manual (M), Auto multi-program (Pm), Normal program (P), Shutter-priority (S) and Aperture-priority (A).
- (8) Exposure compensation and auto exposure bracketing
- (9) Variable delay self-timer and two-picture mode
- (10) Lens with no built-in CPU available in combination with the center-weighted metering and in A, M modes
- (11) TTL flash exposure compensation and rear-curtain sync
- (12) 6V lithium battery pack

Usable film

- (1) DX film speed setting: ISO25-ISO5000
- (2) Manual film speed setting: ISO6-ISO6400
- (3) Film speed is displayed in both internal and external LCD panels while pressing the film speed (ISO) button.
- (4) If non DX-coded film is loaded in auto film speed setting mode, a warning sign appears in LCD panels and shutter release operation is locked after advancing several blank exposures.
- (5) If DX-coded film is loaded in manual film speed setting mode, camera gives priority to the manually set ISO number.

Usable lens

- (1) AF Nikkor lens with built-in CPU: All functions are available.
- (2) Ai-P Nikkor lens with built-in CPU: All functions except AF are available.
- (3) Ai-S, Ai, modified Ai Nikkor lens: A and M exposure modes are available. Matrix metering is switched to center-weighted metering. FA is possible when maximum aperture value is f/5.6 or faster.

Exposure metering system

Maximum aperture exposure metering with 6-segment SPD.

- Matrix metering
- Center-weighted metering (75 ± 10% (ø12) concentration)
- Spot metering (100 +0, -20% (ø3.5) concentration)

Exposure metering range

EV0 — EV19 (ISO100, AF50 f/1.4, 2 sec.(f/1.4) — 1/2000 sec. (f/16)

(Spot exposure: EV4 — EV19)

Matrix metering sensor pattern

•BV0 includes spot metering

•The ratio of BV0 and spot area is 1:15.

Exposure mode

- (1) Normal program mode (P mode)
- (2) Auto multi-program mode (PM mode)
- (3) Shutter-priority mode (S mode)
- (4) Aperture-priority mode (A mode)
- (5) Manual mode (M mode)

Normal program mode (P mode)

- Program shift function is released when shutter prerelease timer is OFF, power switch is OFF or two buttons are reset. (in P and PM modes)
- If shutter speed is slower than the value of 1/(focal length) of the lens mounted, slow shutter speed alert (camera shake warning) appears. No alert or warning appears if shutter speed is faster than 1/500 sec. (in P and PM mode)

Auto multi-program mode (PM mode)

- Program charts vary depending on each AF Nikkor lens' focal length (16-500mm). The program charts are designed to overcome camera shake conditions particularly in low brightness. The program charts place priority on smaller apertures so that the shutter will be as fast as possible in medium brightness. In very bright conditions, the smallest aperture is moderated to avoid the affects of diffraction.

Shutter-priority mode (S mode)

- Shutter-priority mode becomes available only when Nikkor lens with a built-in CPU is mounted. Exposure mode is automatically switched to aperture-priority mode when other Nikkor lens is mounted. Exposure mode indicator blinks.
- Aperture value is displayed on the LCD at 1EV step. If aperture value is equal to maximum aperture value, the value is displayed at 1/6 steps.
- If aperture value is out of the controllable range, the aperture is controlled by minimum aperture (Fmin or High) or maximum aperture (Fmax or low). Shutter release is not locked. In S mode, you cannot set shutter speed to bulb setting.

Aperture-priority mode (A mode)

- The A mode is available within the shutter speed range of 30 sec. to 1/2000 sec. Shutter speed value is displayed at 1EV step.
- The aperture setting is shown as "F--" on the LCD when Nikkor lens with no built-in CPU is mounted.
- If shutter speed is slower than the value of 1/(focal length) of the lens mounted, slow shutter speed alert (camera shake warning) appears. No alert or warning appears if shutter speed is faster than 1/500 sec. If shutter speed is longer than 1/45 sec., the warning appears when Nikkor lens with no built-in CPU is mounted.
- If shutter speed value is out of the controllable range, the shutter speed is controlled at 30 sec. (Low) or 1/2000 sec. (High). Shutter release is not locked.

Manual mode (M mode)

- Shutter speed and aperture values are displayed at 1EV step. If maximum aperture value is displayed at 1/6 EV step.
- NO Hi and Lo indicators are displayed.
- Shutter speed can be set to bulb setting.

Aperture control in PM mode and S mode

- (1) Relation between the stroke of aperture coupling lever and pulse numbers

	Stroke	Pulse number
First step	0.975mm	12
Others	0.650mm	8

- (2) Display of maximum aperture

Display should change as shown in the following figures. "Δ" indicates clock stop position.

① 50/1.4

② 50/1.8

③ 50/1.2

④ 35~70/3.3~4.5

**AE lock**

- (1) Exposure data can be memorized as brightness values.
- (2) Shutter prerelease timer is retained while the AE lock is activated.
- (3) When AE lock is activated while using a speedlight, camera gives priority to the speedlight.
- (4) Metering mode selection is possible while AE lock is activated. In this case, exposure is controlled at the exposure mode selected.
- (5) When AF lock is activated, simultaneous AE-AF locks are available.

F-Fo signal

Mechanical coupling detection system within the range of 8EV. Input signal is analog.

Fo signal

Fo signal detection is made by CPU data in the lens.

Fmin signal

Fmin signal detection is made by CPU data in the lens.

Fmm signal

Fmm signal detection is made by CPU data in the lens.

EE identification signal

No mechanical detection is available. (No distinction is found between Ai and Ai-s.)

Viewfinder diopter

Visual field: 1 dpt

Display: 1.1 dpt

Shutter prerelease switch

- (1) Shutter prerelease timer holds for 8 seconds.
- (2) Shutter prerelease timer after shutter has been released holds 2 seconds after detaching the finger from the shutter release button.
- (3) Shutter prerelease timer holds until charging of the condenser is completed even when the finger is removed while the built-in speedlight is being popped up.

Auto film loading

- (1) Advances three blank exposures. Mirror moves but shutter does not operate.
- (2) No blank exposure is made when frame counter indicates more than "1".
- (3) No DX-code is read while advancing blank exposures. All DX contacts are grounded.

Frame counter

- (1) Frame counter displays E, 0, 1, ... 99.
- (2) Counting up when advancing film, counting down when rewinding film.

Film rewinding

- (1) Exposure operation is prohibited.
- (2) Film is rewound completely into film cartridge. (Standard setting)
- (3) No DX-code is read while rewind film. All DX contacts are grounded.

Accessories

Sync contact

Contact efficiency is more than 50% at both standard time of 1ms and 2.5ms.

Ready contact

- (1) Recognizing that a speedlight is mounted when the voltage of the dedicated speedlight is 1.4V (min.) and the current is 30 μ A (min.).
- (2) Ready-light LED lights up when the voltage of the dedicated speedlight is 2.4V (min.) and the current is 0.5mA (min.). It goes out when the current is under 0.1mA or less.

TTL flash output stop contact

- (1) Indicating the dedicated speedlight to stop firing when it is in TTL flash output mode. At this moment, the voltage of the contact is 0.3V or less and the current is approx. 20mA.
- (2) When the voltage of the contact of the speedlight becomes low for more than 10ms when shutter prerelease timer is OFF, camera's shutter prerelease timer goes ON.

Monitor contact

- (1) Recognizing that a speedlight in TTL flash output mode is mounted when the voltage of the monitor contact is 0.7V or less.
- (2) TTL flash output is not available when the voltage of monitor contact is 0.9V (min.).
- (3) The voltage of the contact is 0.43V to 1.85V for the input current of 80 μ A when main switch is OFF or shutter prerelease timer is OFF.

Lens releasing

The lens releasing and mounting angle is approx. 60.5°.

Aperture coupling ring

- (1) Aperture stop-down reading is 1/9EV steps.
- (2) θ_1 is 52° +0°, -1°
 θ_2 is 113.5° or more.

Aperture coupling lever

- (1) Total stroke is 7.4mm or more.
- (2) Aperture stop down is completed in approx.110ms or less after shutter release switch has been ON at minimum aperture.
- (3) Actually, aperture stop down operation is completed in approx. 30ms at minimum aperture.

Main mirror

- (1) Main mirror moving up time: 20 to 30ms
- (2) Main mirror moving down time: 50 to 60ms
- (3) Main mirror bounding time when moving down: 90ms or less.
- (4) Full half mirror. Transmissivity: 35%

Shutter release if camera back is opened.

Available in any mode. (Same as that when camera back is closed.)

Built-in speedlight

- (1) Guide number: 13 (ISO100 in M mode)
- (2) Bounce angle: Covering 28mm lens
- (3) Charging time: Approx. 2.5 sec. (using fresh batteries at room temperature)
- (4) Light distribution characteristics:

	Vertical	Horizontal
-1EV	26.5° from center	35° from center

- (5) Recommended usage warning
Warning indicator appears under either one of the following two conditions:
 - Center-weighted BV - Spot BV ≥ 2
 - Center-weighted BV < 10 - AV
- (6) ISO film speed setting available for TTL flash output:
ISO 25 - 800

ISO film speed setting available for TTL flash output with external speedlight mounted.
ISO 25 - 1000

Shutter release screw

Taper screw type

Screen shade

No shade which actually affects pictures appears with 800mm f/8 lens.

AF detection

TTL distance metering using a phase difference detection method with built-in AP2'.

AF detection range

EV-1 to EV19 (at maximum aperture of less than f/5.6.)

AF lens driving

- Continuous servo AF mode
- Single servo AF mode
- Manual focusing mode

AF tracking

In each mode of AF (C or S) and each film advance mode (C or S), their combination, AF tracking is automatically activated when shooting a moving subject.

AF illuminator

AF illuminator is automatically set with Nikon dedicated speedlight is mounted when shooting a subject with approx. EV3 in single servo AF mode.

AF motor

- (1) AF encoder outputs 312 pulses when a coupling shaft rotates one turn.
- (2) Motor rating: 14,500 rpm at 6V, under 270mA.

AF lock

AF lens driving stops and at the same time auto focus is locked while AF is locked, shutter prerelease time is not OFF.

Power source

6V lithium battery pack (CRP2 type)

Battery check

Normal battery voltage:	Approx. 6 to 4.8V
	Shutter prerelease timer holds for 8 seconds.
Warning appears:	Approx. 4.8 to 4.5V
	Shutter prerelease timer does not hold any moment.
Battery is exhausted:	Approx. under 4.5V
	All indicators blink during shutter prerelease operation and shutter release is locked .

Current consumption

Less than 20 μ A (when main switch is OFF)
 Less than 400 μ A (when main switch is ON and shutter prerelease timer is OFF.)
 Less than 240mA (when exposure metering or focusing operation is activated, or shutter prerelease switch is ON.)
 Less than 500mA (when driving AF 50mm f/1.8 lens)
 Battery life lasts for 7 hours at room temperature (when shutter speed is set to BULB.)

Function guaranteed conditions

Camera functions normally at 0°C to +40°C with relative humidity of less than 80%, or camera functions normally at -10°C with relative humidity of less than 50%.

Normal operation guaranteed conditions

Camera works normally at +40°C with relative humidity of 85%, or camera works normally at -20°C to -10°C with relative humidity of less than 50%.

Guaranteed storage conditions

Camera functions normally in 20 hours after storing it for 20 hours under the environment at +60°C with relative humidity of less than 60%, or at +50°C with relative humidity of 85%, or -30°C with relative humidity of less than 60%.

2. Unavailable lens

Lenses other than listed above are not usable.

The following are lenses to which special care should be taken.

- (1) Rear end of the following old lenses interferes with main mirror and the body is damaged.

(These old lenses are not recommended in this respect.)

Pisheye 6mm f/5.6 656001 or after all others

Pisheye OP 10mm f/5.6 180011 or after all others

- (2) Old lenses (those prior to Ai lenses, except modified Ai lenses) interfere with P-Po coupling ring (not swing-up type) of body, and the P-Po coupling ring is damaged.

- (3) Aperture ring of the following lenses interfere with P-Po coupling ring, and the body may be damaged.

*200 - 600mm f/9.5	280001 - 300490**
*ED 180-600mm f/8	174041 - 174166**
*ED 360-1200mm f/11	174031 - 174087**
*400mm f/5.6 + focusing unit AU-1	For all lenses
*600mm f/5.6 + focusing unit AU-1	For all lenses
PC 28mm f/4	174041 - 180900
PC 35mm f/2.8	851001 - 906200
Reflex 1000mm f/11	142361 - 143000
Reflex 2000mm f/11	200111 - 200310

The above mentioned lenses will be usable with some modification and repair. But lenses attached with "*" are not usable because stop-down by preview button of the body and coupling of exposure meter by metering are necessary. (But they work if used in M without using exposure meter.)

**The following three lenses may not be used even through they are in the attachable range.

200-600mm f/9.5	280001 - 301922**
ED 180-600 f/8	174041 - 174180**
ED 360-1200mm f/11	174031 - 174127**

- (4) Following lens is not usable due to the lack of sync terminal on F-601 and F-601M.

Medical 200mm f/5.6 104011 or after all others.

But usable when hot shoe adapter (AS-15) is used together (in M mode).

- (5) The following teleconverter for F3AF is not usable.

AF TC-16S

200001 and after all others

- (6) The following teleconverter is not usable due to lack of Ai coupling capability.

TC-1

175121 and after all others

TC-2

175071 and after all others

- (7) Lenses for F3AF

To prevent malfunction, never use the following lenses

AF Nikkor 80mm f/2.8S (for F3AF)

AF Nikkor ED 200mm f/3.5S (IF) (for F3AF)

(2) SC cord

Abbreviation	Usable or not usable	Order No. / Product name	Applicable flash	Application	Configuration
SC-1	Usable in combination with AS-15 ○	20PA25C Sync cord	SB-1, 2, 3 5, 6, 7, 8, 10	Developed for SB-1. Connecting between camera's sync terminal and flash unit. (No sync terminal on P-501)	
SC-2	Usable in combination with AS-15 ○	20PA25C1 Sync cord	SB-1, 2, 3 5, 6, 7, 8, 10	Extended SC-1 cord.	
SC-3	Usable in combination with AS-15 ○	20PA25C3 Sync cord	SB-1, 2, 3 5, 6, 7, 8, 10	Coiled SC-1 Cord.	
SC-4	Usable	20PA25C4 Ready-light connector	SB-1, 2, 3 5, 6, 7, 8, 10	Once mounted on accessory shoe of P2, sync signal and ready-light signal are connected.	
SC-5	Usable in combination with AS-15 ○	20PA25C5 PSG00301 Sync cord	SB-1, 2, 3 5, 6, 7, 8, 10	Connecting between camera's sync terminal and flash unit.	
SC-6	Usable in combination with AS-15 ○	20PA25C6 Sync cord	SB-1, 2, 3 5, 6, 7, 8, 10	Coiled SC-5 cord.	
SC-7	Usable in combination with AS-15 ○	20PA25C7 Sync cord	SB-1, 2, 3 5, 6, 7, 8, 10	Connecting between camera's sync terminal and flash unit.	
SC-8	Usable in combination with AS-15 ○	20PA25C8 Sync cord	For SB-4 only.	Connecting between camera's sync terminal and SB-4.	

Abbreviation	Usable or not usable	Order No. / Product name	Applicable flash	Application	Configuration
SC-9	Usable (with AS-2 together) ○	30FA25C9 PSG00701 Sensor remote cord	SB-5, 6	Connecting between sensor terminals of SB-5, SB-6 and accessory shoe of F2 type camera. SU-1 can be mounted on top side of portion (B).	
SC-10	Usable in combination with AS-15 ○	30FA29C PSG00901 Sync cord	All flash (Usable in combination with AS-15 for flash for F series)	Connecting to sync terminal of camera with no hot shoe provided.	
SC-11	△	PSG01401 Sync cord	SB-11, 12, 14, 15, 16, 17, 20, 140	Connecting between sync terminal of camera and flash, or between flashes. (Developed for SB-11)	
SC-12	△	PSG01201 TTL remote cord	SB-11, 14, 140	Connecting between F3 and SB-11, 14 making possible TTL auto flash output.	
SC-13	○	PSG01301 Sensor remote cord	SB-11, 14, 140	Connecting the part (B) on camera accessory shoe with SU-2 to make external auto flash output possible.	
SC-14	△	PSG01401 TTL remote cord	SB-16A, 12, 17	Separating SB-16A from F3 to make TTL auto flash output possible.	
SC-15	△	PSG01501 Coiled sync cord	SB-11, 12, 14, 15, 16, 17, 20	Coiled version of SC-11.	
SC-16	○	PSG01701 Power cord	SB-11, 14, 20	Connecting between flash and battery power pack SD-6, 7.	

Abbreviation	Usable or not usable	Order No. Product name	Applicable flash	Application	Configuration
SC-17	○	PSG01801 TTL remote cord	SB-15, 16B, 18, 20	Separating flash from camera to make TTL auto flash output possible. Two multiflash terminals are provided.	 1.5m Tripod hole
SC-18	○	PSG01901 TTL multiflash sync cord	(AS-10 is required.) SB-15, 16, 17, 18, 20	Connecton cord for multiflash.	 1.5m
SC-19	○	PSG02001 TTL multiflash sync cord	(AS-10 is required.) SB-15, 16, 17, 18, 20	Extended cord of SC-18.	 3m
SC-20	Usable in combination with AS-15 ○	1B060-016 2-pin sync cord	Medical 120/4(IP)	Connecting between sync terminal of Medical and that of camera.	 For medical use.
SC-21	○	1B0609-017-1 Power cord	Medical 120/4(IP)	Connecting between power connector of Medical and LA-2, LD-2.	 4Hole 4pin
SC-22	○	1B060-028 3-pin sync cord	Medical 120/4(IP)	Alternative cord of SC-20 for camera with no sync terminal provided.	 For medical use. Shoe
SC-23	○	PSG02101 TTL remote cord	SB-11, 14 140	Connecting between cameras (P-301, P-501, PA, PB2, PG) with TTL function and flashes as described in the left column.	 10pin Shoe
SC-24	×	PSG02201 For multiflash		Cord for converting P4 sync terminal to connect to accessory shoe.	 Shoe

(3) AS adapter

Abbreviation	Usable or not usable	Order No. Product name	Applicable flash	Application	Configuration
AS-1	Not applicable	20FA11G FSW51501 Flash unit coupler	SB-10, 15, 16B, 19, E, 20	For F2 series.	 Hot shoe (X) For F2
AS-2	○	32PA13 FSW51601 Flash unit coupler	SB-7	Attaching SB-7 on the hot shoe of camera.	 P2 shoe (X) Hot shoe
AS-3	Not applicable	FSW50601 Flash unit coupler	SB-7	Attaching SB-7 on P3 camera.	 P2 shoe (X) For P3 shoe
AS-4	Not applicable	FSW50701 Flash unit coupler	SB-10, 15, 16B, 19, E, 20	Attaching flashes as shown in the left column on P3 camera.	 Hot shoe (X, Ready) For P3 shoe
AS-5	Not applicable	FSW51101 Flash unit coupler	SB-16A, 17, 12	Attaching flashes as shown in the left column on P2 camera.	 P3 shoe (X) For P2 shoe
AS-6	○	FSW51201 Flash unit coupler	SB-16A, 17, 12	Attaching flashes as shown in the left column on the hot shoe of camera.	 P3 shoe (X, Ready) For hot shoe
AS-7	Not applicable	FSW51701 Flash unit coupler	SB-16A, 17, 12, 15, 16B, 19, E, 20, 11, 14	Permits you to replace film cartridge or rewind film while attaching flashes as shown in the left column on P3.	 Hot shoe P3 shoe For P3 shoe
AS-8	△	FSW51901 SB-16 controller	SB-16	Connecting between SB-16 unit and P3 camera. (16A: SB-16 unit + AS-8)	 SB-16 unit For P3 shoe

Abbreviation	Usable or not usable	Order No. Product name	Applicable flash	Application	Configuration
AS-9	○	PSW52001 SB-16 controller	SB-16	Connecting between SB-16 unit and F-501, F-301, PA, FE2 or PG, (16B: SB-16 unit +AS-9)	 SB-16 unit For hot shoe
AS-10	○	PSW52101 TTL multiframe adapter	SB-15, 16B, 20	Use SC-18, 19 to connect additional flash prior to flash or SC-17.	 Accessory shoe (4 contacts) Multiframe terminal #3 Tripod socket
AS-11	○	PSW52201 Tripod adapter	SB-16A, 17	(Same as above)	 For P3 shoe Tripod socket
AS-12	△	PSW52701 Micro speedlight controller	SB-21 (SB-21 + AS-12 = SB-21A)	Controlling SB-21 unit (flash head). For P3. Attaching AS-12 on camera.	 External power connector Power selection SW Connector (8 pins) for flash head For P3 shoe
AS-13	—	Blank	—	—	
AS-14	○	PSW52801 Micro speedlight controller	SB-21 (SB-21 + AS-14 = SB-21B)	Controlling SB-21 unit (flash head). For F-501, F-301, PA, FE2, and PG. Use a connector to connect to SB-21 after attaching AS-14 to accessory shoe of camera.	 Ready-light Flash mode selector SW Over-change warning lamp For hot shoe
AS-15	○	Hot shoe adapter	—	Attaching to camera with no sync terminal provided, using sync terminal of AS-15.	 Sync terminal For hot shoe

5. Shutter release-related accessories

Abbreviation	Usable or not usable	Order No. / Product name	Remarks
AR-1	×	20FA61 PWN00401 Soft shutter	Putting on covered type shutter release button. (P2, PE)
AR-2	(Usable in combination with AR-8) △	20FA60 PWN00501 Cable release	For cameras with covered-type shutter release button. (P2, PE) Take care interference between shutter release portion and lens when used with F-801 (though MR-1 or MR-2 is necessary.)
AR-3	○	31FA60B PWN00601 Cable release	For cameras (F3, FA, PE2, New FM2, FG, FG-20, EM, etc.) with taper screw shutter release button provided. MR-3 is required for use with F-801. Take care for interference between shutter release portion and lens. MC-12 is alternatively available.
AR-4	(Usable in combination with AR-8) (△)	20FA60W PPW21601 Double release	Close-up shooting is possible at full aperture using PB-6 + AR-4. Also possible with PB-4, 5 + BR-4 + AR-4. Cameras with covered-type shutter release button (P2, PE). AR-10 is alternatively available. It is possible to attach to F-801 with MR-1, 2, but likely to interfere with bellows.
AR-6	○	PWN01101 Grip shutter release	Connecting between pistol grip and taper screw-type shutter release portion. When using with F-801, MR-3 is required. Be careful with interference between shutter release (MR-3) and lens.
AR-7	○	40FA60W PPW21701 Double release	Same function as in AR-4. For cameras with taper screw-type shutter release button. It is possible to attach to F-801 with MR-3, but likely to interfere with bellows. AR-10 is alternatively available.
AR-8	○	PWN01001 Release adapter	Conversion adapter making covered-type shutter release button possible to be used with cameras with taper screw-type shutter release button.
AR-9	○	PWN01201 Soft shutter	Putting on taper screw-type shutter release button. (F3, etc.)
AR-10	×	PPW21901 Double release	Close-up shooting is possible at full aperture using F-801 + BP-6. Connecting the tip of cable for camera to the remote connector. (Electrical release)

Adaptability with remote control accessories

Following accessories are not usable (because lack of remote terminal)

MC cord

MC-3A, MC-4A, MC-5A, MC-8A, MC-12A, MC-16A

MC-1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 17S, 18

PX-1723

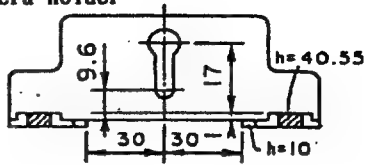

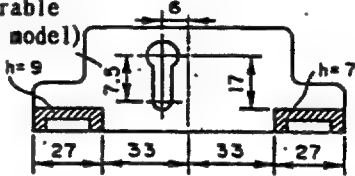

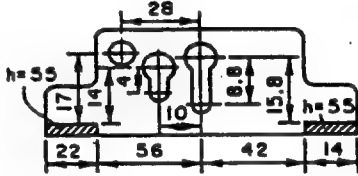

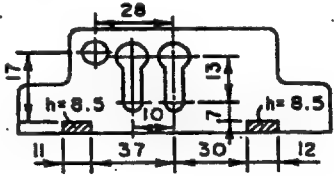

Remote control accessories

Following accessories are not usable (because lack of remote terminal)

MT-1, MT-2, MW-1, MW-2, ML-1, ML-2, MR-1, MR-2, MR-3

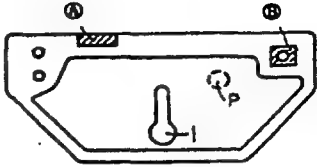

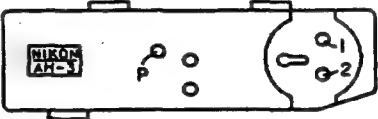

6. Reprocopy outfit and close-up accessories

(1) Reprocopy outfit accessories

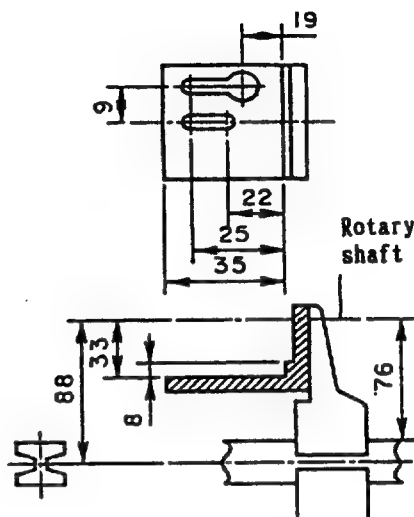

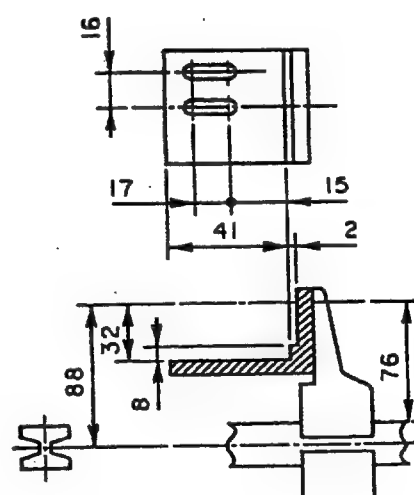

Abbreviation	Usable or not usable	Order No./ Product name	Remarks
PF-1	×	20PA68 Reprocopy outfit PF-1	Shape of camera holder 
PF-2	×	20PA68D PPA50101 Reprocopy outfit PF-2	Two types are available (8.5 for the other model) 
PF-3	×	20PA69 PPA50201 Reprocopy outfit PF-3	Modified from circle type supporter (PF-2) to square type. 
PF-4	○	20PA69 PPA50202 Reprocopy outfit PF-4	Supporter is common to PF-3. Camera holders only differs (function of holders of PF-3 and PH-4 are combined.) 
PH-3	Not applicable	20PA69M Camera holder PH-3	PH-3 is separately provided as a dedicated holder for cameras with MD, since the holder of PF-3 is not enough for attaching cameras with MD securely.
PH-4	○	20PA69H PPW50801 Camera holder PH-4	The holder of PF-4 is available separately as PH-4 for those who have PF-3 without buying PF-4 as: PF-3 (supporter) + PH-4 (holder) = PF-4.

Cannot be used with F-801 body alone.

(2) Reprocopy outfit auxiliary accessory

Abbreviation	Usable or not usable	Order No. / Product name	Remarks
PA-4	×	PPW50901 Camera adapter	For F-801 and F4. Attaching the body to the projectors (A) and (B), secure the body at the hole 1. Furthermore, fix the camera holder of reprocopy outfit for female screw of portion "P" on PA-4. 
AH-3	Not applicable	PRW51502 Tripod adapter AH-3	For F-501, F-301 (also usable with other motor drive)  Fix MB-4 at the hole 1, MB-3 at the hole 2, and fix reprocopy outfit with female screw of portion "P".

(3) Focusing stage

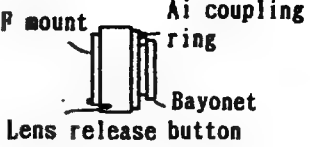

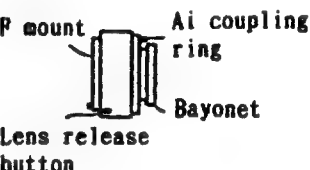

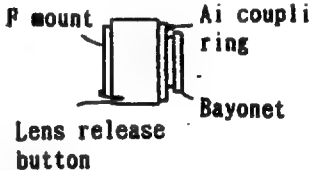

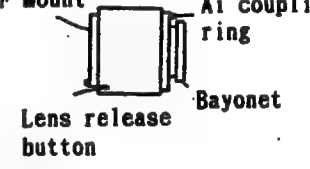

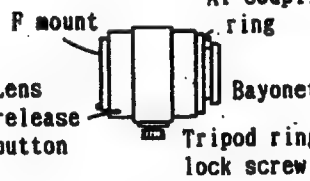

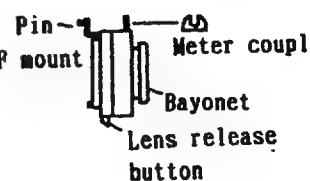

Abbreviation	Usable or not usable	Order No. / Product name	Remarks	
PG-1	○	30PA65 PPA00501	<ul style="list-style-type: none"> • Optical path changes when turning 90° (approx. 4mm). • Optical path offsets from rail shaft (approx. 3mm). 	
PG-2	○	From lot number 4 of 30PA65 (May 19, 1979 ~) PPA00502	<ul style="list-style-type: none"> • Optical path changes when turning 180° or 90°. • Optical path offsets from rail shaft. • When setting grip side of P-801 toward down (rail side), one PB-6D is required (for preventing interference with rail). 	

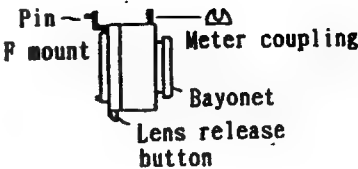

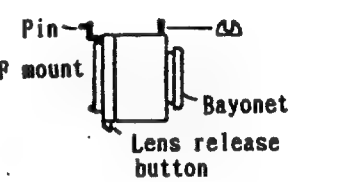

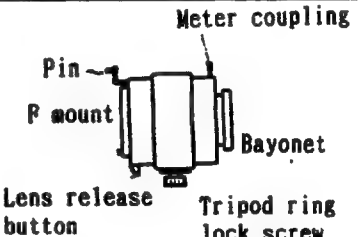

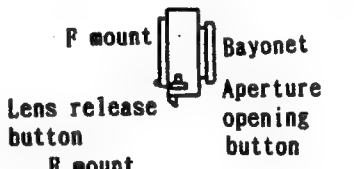

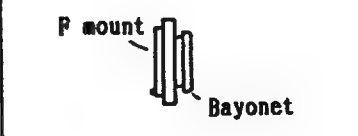

(4) Bellows

Abbreviation	Usable or not usable	Order	Horizontal position of camera		Vertical position of camera		Rotation	Remarks
			Attaching	Sliding	Attaching	Sliding		
PB-2 (Type 2)	×	20FA89	×	(Possible)	Attachable at the edge surface.		Available at the edge surface.	For stop-down metering only. For P series cameras. Two round bar type rails.
PB-3	×	20FA90	○					Mounting around hand-grip is not possible. Stop down metering only. Edge surface of holder is secured. No vertical position conversion is provided. For P-series cameras. One △ type rail.
PB-4	△	20FA91 PPA00101	△*	○	○	○	○	Stop-down metering only. For P-series cameras. Two round bar type rails
PB-5	△	20FA93 PPA00201	△*	○	○	○	○	Stop-down metering only. For P-series cameras. Two round bar type rails
PB-6	△	30FA64 PPA003AA	△*	○	○	○	○	Full aperture metering is possible. One l-type rail.

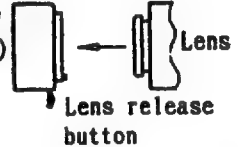

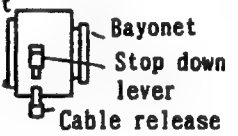

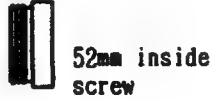

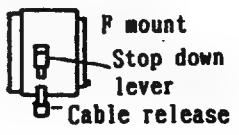

*Note: Attaching while keeping camera in horizontal position is impossible. (Hand-grip of P-801 interferes.)
You must attach after changing the PB to the vertical position, and rotating it.

(5) Rings

Abbreviation	Usable or not usable	Order No./Product name	Note	Specifications	Configuration
PK-11A	○	PPW00703 Ai auto close-up adapter ring	—	Modified type of PK-11, solved the problem of interference at contacts between AF lens and PK-11. Other specification are common to PK-11. (Available to be combined with other PK rings.)	 <p>P mount Ai coupling ring Bayonet Lens release button</p>
PK-11	△	20FA35P1 PPW00702 Ai auto close-up adapter ring	Not usable when connecting to AF lens directly. (Contacts interfere. PK-11A is alternatively available.)	$\ell = 8\text{mm}$. Ai coupling ring f-fo are provided. Combination: PK-11, PK-11 + PK-12, PK-11 + PK-13, PK-11 + PK-12 + PK-13. (Other combinations are also available.)	 <p>P mount Ai coupling ring Bayonet Lens release button</p>
PK-12	○	20FA35P2 PPW00802 Ai auto close-up adapter ring	—	$\ell = 14\text{mm}$. Ai coupling ring f-fo are provided. Combination: PK-12, PK-12 + PK-13. (Other combinations are also available.)	 <p>P mount Ai coupling ring Bayonet Lens release button</p>
PK-13	○	20FA35P3 PPW00902 Ai auto close-up adapter ring	—	$\ell = 27.5\text{mm}$. Ai coupling ring f-fo are provided. (Available to be combined with other PK rings.)	 <p>P mount Ai coupling ring Bayonet Lens release button</p>
PN-11	○	20FA36 PPW01002 Auto close-up adapter ring	—	Dedicated close-up ring for Micro 105mm f/2.8 lens. Magnification: 1/2 to 1/0.88 (Micro Ai 105mm f/4 lens is also usable.)	 <p>P mount Ai coupling ring Bayonet Tripod ring lock screw Lens release button</p>
PK-1	×	20FA33P1 PPW00701 Auto close-up adapter ring	Ai cannot work together. (P-Po of body may be damaged.) AF lens cannot be used. (Contacts may interfere.)	$\ell = 8\text{mm}$. During volume production, f-fo interference was eliminated. Be sure that F-801 cannot be used due to incapability of stop-down.	 <p>Pin P mount Ai coupling ring Bayonet Lens release button</p>

Abbreviation	Usable or not usable	Order No /Product name	Note	Specifications	Configuration
PK-2	×	20FA33P2 FPW00801 Auto close-up adapter ring	Ai does not work together. (P-Po of body may be damaged.)	$\ell=14\text{mm}$. Others are same as above.	
PK-3	×	20FA33P3 FPW00901 Auto close-up adapter ring	Ai does not work together. (P-Po of body may be damaged.)	$\ell=27.5\text{mm}$ Others are same as above.	
PN-1	×	20FA33P4 FPW01001 Auto close-up adapter ring	Ai does not work together. (P-Po of body may be damaged.)	Delicated close-up ring for Micro 105mm f/4 lens only. Magnification: 1/2 to life-size. Tripod socket is provided.	
B-2	△	20FA32S FPW00501 Close-up adapter ring	Manual exposure only.	$\ell=14\text{mm}$. No data communication. Press ring button to make full aperture (for focusing).	
M-2	×	20FA19C FPW00601 Close-up adapter ring	A & M mode cannot be used.	$\ell=27.5\text{mm}$	
K-1	△	FXA10001 K1 ring	AP lens cannot be used. (Contacts interferes). It is usable with K3. "()" as shown in right column indicates not usable.	$\ell=5.8\text{mm}$ No data communication. (K1), K3 + K2 + K1. K3 + K4 + K2 + K1 K3 + K5 + K2 + K1 K3 + K5 + K4 + K2 + K1	

Abbreviation	Usable or not usable	Order No./Product name	Note	Specifications	Configuration
K-2	× (△)	PXA10002 K2 ring	Due to three grooves (120°), body coupling may be damaged. “() ” as shown in right column indicates not usable.	ℓ=5mm. No data communication. (K3 + K2), (K3 + K4 + K2), (K3 + K5 + K2), (K3 + K4 + K5 + K2) Usable in combination with K1 ring.	Inside screw  Bayonet
K-3	△	PXA10003 K3 ring	Combinations with other rings (except K3 + K2) are available.	ℓ=5.8mm. No data communication. Mainly used in combination with K2 ring.	P mount  Screw
K-4	△	PXA10004 K4 ring	Combination with K2 is not available. Usable in combination with K2 + K1.	ℓ=10mm. No data communication. Make sure to insert between K2 and K3 rings.	Inside screw  Screw
K-5	△	PXA10005 K5 ring	Combination with K2 is not available. Usable in combination with K2 + K1.	ℓ=20mm. No data communication. Make sure to insert between K2 and K3 rings.	Inside screw  Screw

Abbreviation	Usable or not usable	Order No /Product name	Note	Specifications	Configuration
BR-2A	△	FPW00202 Macro adapter ring		AF lens measured ring of BR-2. Specifications are common to BR-2.	52mm screw  Bayonet
BR-2	×	20FA89B FPW00201 Macro adapter ring	Due to three grooves (120°), body coupling may be damaged.	Reversely mount lens on camera body, bellows and another ring. For 52mm lens. Lens with f=85mm or longer cannot be used when mounted directly (due to out of focus.)	52mm screw  Bayonet
BR-3	○	20FA89D FPW00301 Adapter ring		Attaching to lens bayonet. Adapter for attaching filter when lens mounting reversely with BR-2A.	Filter inside P mount screw (52mm)  Lens release button
BR-4	△	20FA34 PPW00401 Auto adapter ring for bellows	AP lens cannot be used (due to interference with contacts) BR-6 + BR-2A are alternatively available.	Used in combination with bellows and AR-10. (Combination with BR-2A is also available.) Lens aperture is always full aperture unless operating stop-down lever.	P mount  Bayonet Stop down lever Cable release
BR-5	○	PTW00401 Filter diameter step-down ring	Do not use with BR-2 but with BR-2A.	When mounting 62mm (attachment size lens) reversely on camera body, convert the attachment size to 52mm using BR-5 once, then use BR-2A (for 20mm f/2.8, 35-70mm f/3.5, etc.)	62mm screw  52mm inside screw
BR-6	○	PPW01301 Auto adapter ring for Micro light.	Use with BR-2A in place of BR-4.	(1) Used as Macro light mounting attachment when lens is mounted reversely. (2) Used in combination with BR-2A in place of BR-4. Specifications are common to BR-4 in this case.	Filter inside screw (52mm)  P mount Stop down lever Cable release

7. Other accessories

- (1) Polarized filter (52mm, 62, 72mm) cannot be used.
Circular polarized filter is usable.
- (2) Body cap BF-1 cannot be used. (Do not attach otherwise interferes with mount.) BF-1A is alternatively available.
- (3) Angle finder DR-3 can be used in combination with eyepiece adapter.
- (4) Magnifier DG-2 can be used in combination with adapter.
- (5) Eyepiece correction lens, eyepiece cap (for F-401, FG, EM) can be used.
- (6) Close-up lens can be used.
- (7) Cases are common to those for F-601M, F-601.
Standard case CP-45 (FAE07601) for camera with 35-70mm lens.
Case CP-46 (FAE07701) for camera with 35-135mm lens.

Disassembling

Disassembling procedure chart ----- D 1

Disassembling

1. Removing of front plate unit

Bottom cover -----	D 3
Grip cover -----	D 3
Flash base unit -----	D 4
Rewind base plate -----	D 4
Top cover -----	D 5
Unsoldering of top cover's wires -----	D 5
Camera back O/C cover plate -----	D 6
Shield FPC -----	D 6
Unsoldering of black wire of lug plate -----	D 6
Unsoldering of wires (grip side) -----	D 7
Unsoldering (rewind side) -----	D 7
Unsoldering of wires (pentaprism) -----	D 8
Removing of screws -----	D 8
Removing of front plate unit -----	D 9

2. Rear body

DX contact, Rewind fork -----	D 1 0
Film advance unit -----	D 1 0
Film advance mechanism unit -----	D 1 1
Shutter -----	D 1 1
Film advance SW, Rewind SW, Motor rotation reducing unit -----	D 1 2
Film roller -----	D 1 2
Small parts of rear body -----	D 1 3

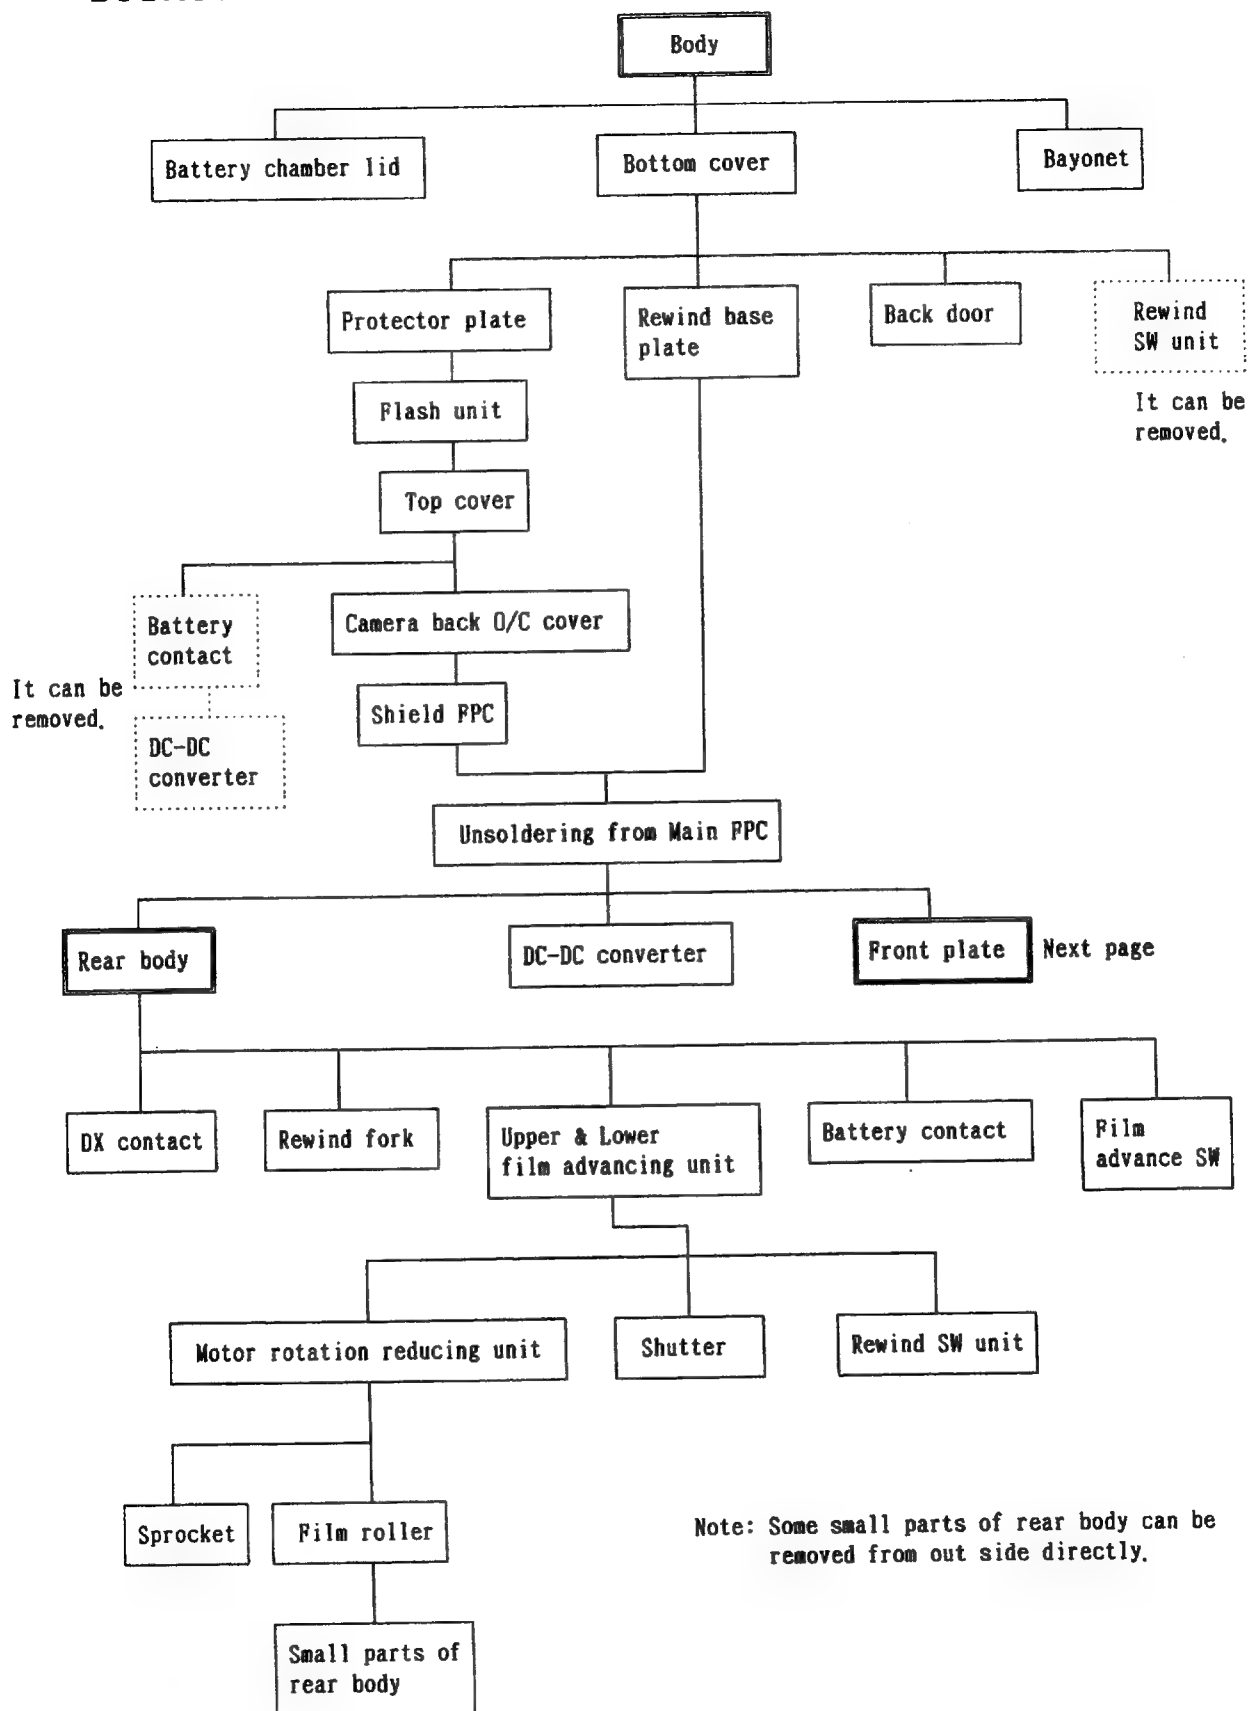

3. Front plate

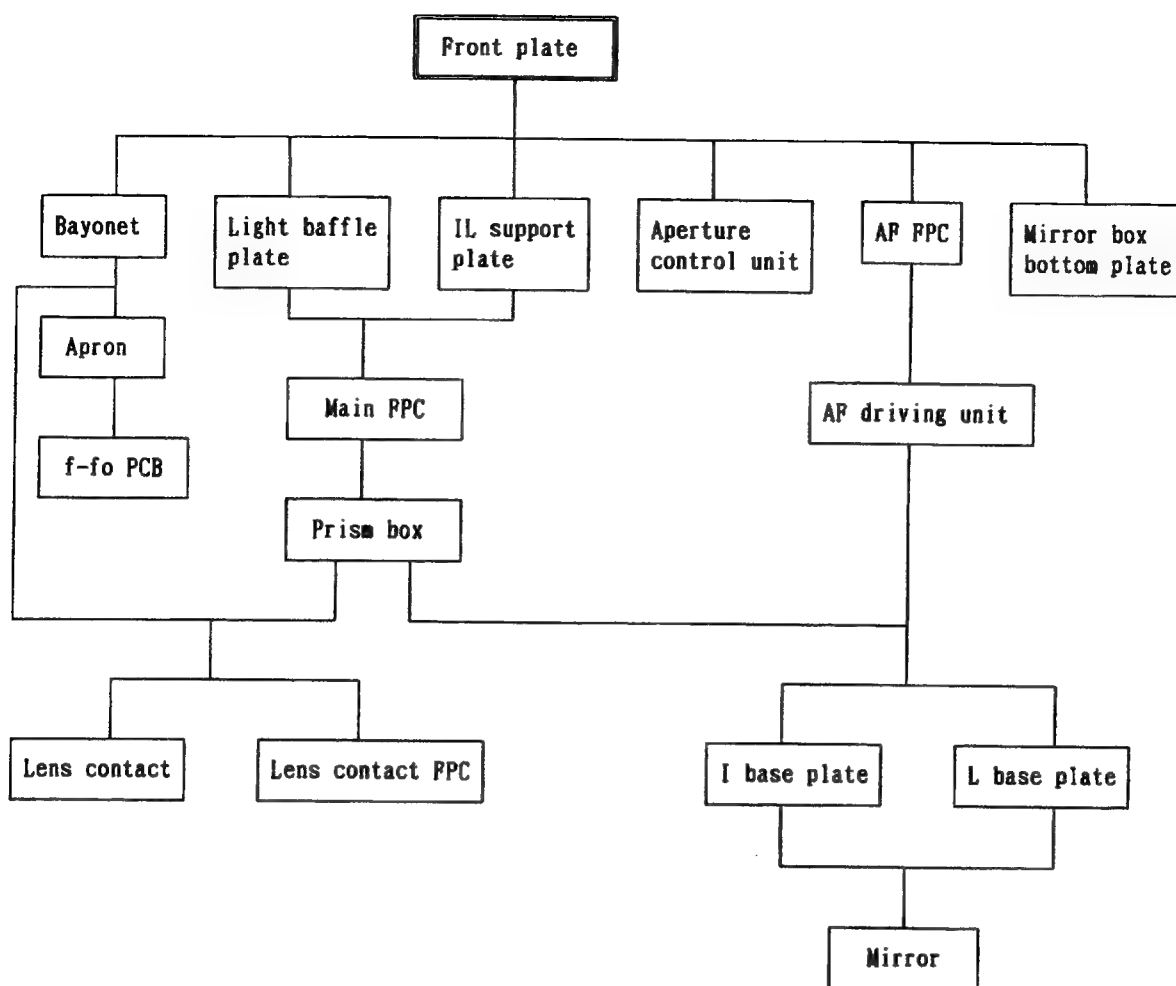

Unsoldering of wires, Removing press-contact	D 1 4
Main FPC	D 1 4
AP FPC	D 1 5
Prism box	D 1 5
Pentaprism, Screen	D 1 6
Aperture control unit, Mirror box bottom plate	D 1 7
Apron, Bayonet	D 1 7
I & L base plate	D 1 8
Disassembling of I & L base plates	D 1 8
AP driving unit	D 1 9
Lens release button	D 1 9
Lens contact, f-fo PCB	D 2 0

Top cover small parts	D 2 1
Camera back door	D 2 1
Top cover	D 2 2

DISASSEMBLING PROCEDURE CHART

DISASSEMBLING

Note:

- ① Remove batteries before disassembling.
- ② When disassembling, pay close attention to the wire arrangement and mounting positions and types of screws to be removed.
- ③ Be sure you are grounded when holding main FPC because static electricity exerts serious adverse effects on ICs.
- ④ The "•" mark on the screws indicates they are tap-tight screws.
- ⑤ The tone of pictures may be different from actual one. Make sure of the shape of parts when disassembling and reassembling.

1. DISASSEMBLING OF REAR BODY AND FRONT PLATE

BOTTOM COVER

- When the bottom cover is removed, discharge the main condenser.
- Remove bottom cover to detach camera back.
- There is a washer at upper shaft of camera back.

GRIP RUBBER, PROTECTOR PLATE

Remove screw #841 after peeling grip rubber off.

FLASH BASE UNIT

Note: Be sure to discharge the main condenser.

Remove only the black wire (Xe: GND) of the main condenser unit, and remove the condenser from the rewind base plate with flash base unit.

REWIND BASE PLATE

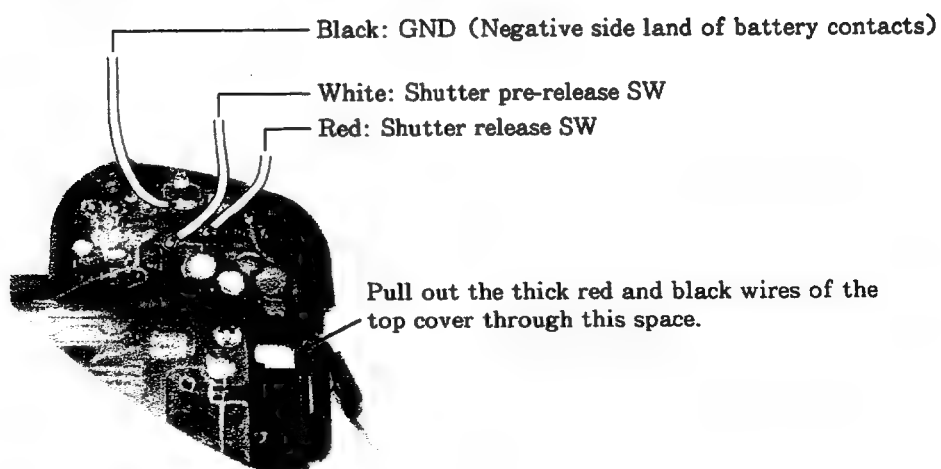

Rewind gear D #194 can be detached.

TOP COVER

REMOVING SOLDERING OF TOP COVER WIRES

* Peel off adhesive tape.

CAMERA BACK OPEN/CLOSE COVER PLATE

SHIELD FPC

BLACK WIRE OF THE LUG PLATE AT THE HAND GRIP SIDE

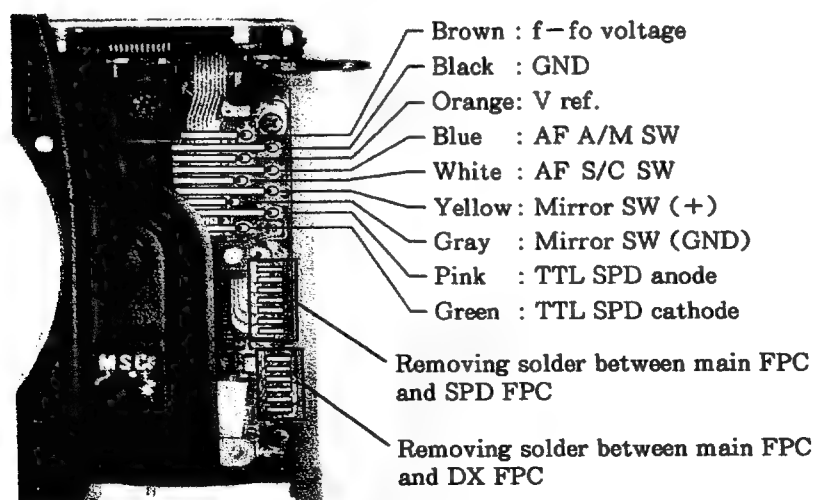

REMOVING SOLDER ON THE UPPER PART OF HAND GRIP

Note: You are not required to remove red and blue wires (aperture Mg) when detaching front plate.

REMOVING SOLDER ON FRONT FILM REWIND SIDE

Note: You are not required to remove solder all wires, between main FPC and SPD FPC when detaching front plate.

REMOVING SOLDER ON THE UPPER PORTION OF PENTA PRISM

Removing solder between main FPC and lens contacts FPC.

- Yellow : Aperture PI LED cathode
- Brown : Aperture PI common Vcc
- White : Aperture PI output
- Black : Aperture PI GND
- Orange: Film advance completion SW
- Yellow: Film rewind SW
- Green : Film detection SW
- Gray : Free sprocket SW (Film advance SW)
- White : Shutter front curtain Mg
- Blue : Shutter rear curtain Mg
- Red : Shutter common
- Black : Shutter GND
- Orange: Sync. contact SW

Note: You are not required to remove solder between front four wires (except for orange) and between main FPC and lens contact FPC when detaching front plate.

REMOVING SCREWS

| [3] | Explowded Drawings ----- | B 3 |
| [4] | Parts List ----- | B 4 |

[1] Specifications

- Type: Liquid crystal display; built-in quartz digital watch
- Film speed: ISO32 ~ 3200
- Imprinting Signal time:

ISO32 ~ 80	100ms
ISO100	60ms
ISO125 ~ 200	45ms
ISO 50 ~ 400	30ms
ISO500 ~ 3200	20ms
- Imprint mode:
 1. Year/Month/Day
 2. Day/Hour/Minute
 3. No imprint
 4. Month/Day/Year
 5. Day/Month/Year

Automatic date adjustment from Jan. 1st, 1987 to Dec. 31, 2019. Lower two digits are displayed for year.
- Imprinting position:

- Power source: 3V Lithium battery (CR2025 x1)
- Clock accuracy: ± 90 sec./month at 20°C
- Dimensions: Approx. 154.5(W) \times 100.0(H) \times 67.0(D)mm
- Weight: Approx. 660g (Without batteries)

[2] How to check

1. Judgement of data imprinting signal.

Output of data imprinting signal can be confirmed by the tester.

- 1) Select the DC 0.1 ~ 10V range of the tester and connect the tester to data back contacts of the body.
- 2) If the signal is output, the needle of the tester moves for an instant when shutter is released.
- 3) Imprinting signal time can be checked in the same method as above using the Oscilloscope instead of the tester.

2. Inspection of imprinting

- 1) Attach mending tape on the data imprinting window of the pressure plate.
- 2) Connect between DB contacts of body and DB contact pins. (Do not connect by soldering)
- 3) Release the shutter, inspect the data imprinted on the mending tape using a magnifying glass.
Imprinted data is reversed and should be the same as displayed.

REMOVING FRONT PLATE

Shutter charge lever
(rear body side)

Shutter set lever
(front plate side)

Give care to the hooking two
levers as shown in the picture.

DC/DC converter

- Remove front plate forwardly while giving care to wires and FPC.
- DC/DC converter can be removed.

2. REAR BODY

DX CONTACT UNIT, REWIND FORK UNIT

Detach rewind fork unit to remove rewind gear shaft #195 and gear #196.

UPPER FILM ADVANCING UNIT

Remove E-ring and washer at the lower of sprocket shaft #62.

Note: Remove screws (×3) only to detach upper film advancing unit.

LOWER FILM ADVANCING MECHANISM UNIT

- Remove screw #721 which holds reference shaft disk B072.
- Peel off adhesive tape #691.

SHUTTER UNIT

Black wire

Remove black wire (film advance SW) from shutter PCB.

FILM ADVANCE SW, REWIND SW UNIT, MOTOR ROTATION REDUCING UNIT

FILM ROLLER

REAR BODY DIECAST SMALL PARTS

3. FRONT PLATE

AF FPC, REMOVING SOLDER OF MAIN FPC WIRES, REMOVING PRESS-CONTACT

MAIN FPC

Supposing that soldered portion as shown in pages D6 to D8 have all been removed.

- Screws #839x2 indicate fixed screws inside viewfinder display.
- Peel off main FPC from penta prism holding plate #426.

Note:

- ① Do not peel main FPC forcibly or it may be damaged, because it is bonded by double coated adhesive tape. Refer to page D16, the way to remove main FPC by removing penta prism holding spring #427 and take off FPC together with penta prism holding plate #426, when you take off main FPC only.
- ② Unless otherwise removing I base plate or L base plate, return IL supporting plate back to the original position. If you remove prism box BB421 with IL supporting plate removed, the gap between I and L base plates vary.

AF FPC

PRISM BOX

* Never remove SPD FPC unless it is necessary.

PENTA PRISM, SCREEN

- When removing screen G3, pull screen spring #424 in the direction indicated by arrow.
- You can remove screen after the body is completely assembled.

APERTURE CONTROL UNIT, MIRROR BOX BOTTOM PLATE

APRON, BAYONET

I & L BASE PLATES

Note: Never remove IL supporting plate #320 unless otherwise disassembling I or L base plate, or the gap between I & L base plates may vary and malfunction the movement of mirror.

DISASSEMBLING I & L BASE PLATES

- Remove screws #753 x 2 of IL supporting plate #320.
- Remove screws #805, and #728 of mirror SW.

AF DRIVING UNIT

LENS RELEASE BUTTON

LENS CONTACT, f-fo PCB

Remove solder of lens contact FPC #1004.

AF MODE SW

4. OTHER ASSEMBLY PARTS

TOP COVER SMALL PARTS

• Parts with part numbers are not included in assembly parts.

• LCD window B524 is secured on the top cover with black double coated adhesive tape.

CAMERA BACK

TOP COVER

■ For other parts, refer to Assembling and adjustment section or exploded drawings.

Adjustment - Assembling

1. Rear body

Small parts of rear body diecast -----	A 1
Film roller -----	A 2
Motor rotation reducing unit -----	A 2
Sprocket, Film advance SW, Rewind SW, Shutter, DX contact -----	A 3
Soldering of Film advance SW's black wire -----	A 4
Wiring of Rewind SW's wires -----	A 4
Film advance mechanism unit, Reference shaft disk, Rewind fork and Film advance unit -----	A 5
Assembling position of Film advance mechanism unit -----	A 6
Assembling position of Reference shaft disk -----	A 6
Assembling position of Film advance unit -----	A 7
Checking of shutter charge lever & mirror up lever -----	A 8

2. Front plate

Lens contact -----	A 9
Lens release button -----	A 10
AF driving unit -----	A 10
Assembling of I & L base plates -----	A 11
Apron, Bayonet -----	A 12
Spring position of I base plate, applying grease, adjustment of aperture lever position & adjustment of mirror SW on position --	A 12
Inspection of AF related SW -----	A 13
Operation of AF driving unit -----	A 13
Height adjustment of AF coupling pin #911 -----	A 13
Aperture control, Mirror bottom plate -----	A 14
Adjustment of aperture control Mg reset position -----	A 14
Pentaprism, Screen -----	A 15

Prism box	A 15
Adjustment of main mirror's angle (45°)	A 16
Adjustment of sub-mirror's angle (45°)	A 16
Adjustment of infinity	A 16
AF FPC, Main FPC, Light baffle plate	A 17
Bending of Main FPC	A 18
Soldering of wires to AF FPC & Main PPC	A 18
Pasting of light baffle plate	A 19

3. Assembling of rear body & front body

Aligning of rear body & front body	A 20
Checking operation	A 22
Soldering	A 22
Camera back D/C cover plate, Top cover	A 25
Soldering of top cover's wires	A 26
Rewind base plate	A 27
Checking & adjustment of body back	A 27
Checking & adjustment of infinity	A 27
Flash base plate, Hand grip	A 28
Soldering of Flash base plate	A 28
Checking & adjustment of AE accuracy	A 29
Checking & adjustment of AF accuracy	A 29
Camera back door	A 30
Bottom cover	A 30
Check & Clean	A 31

4. Other assembly parts

Top cover	A 31
Main mirror, Sub-mirror	A 33
Pasting of AE SPD	A 34

ASSEMBLING

1. REAR BODY

DIECAST SMALL PARTS

BODY-SIDE FILM ROLLER

MOTOR ROTATION REDUCING UNIT

Apply grease to the sliding portion between #59 and #41.

• Mount the motor rotation reducing unit by setting aside film roller.

• Fasten screws #858 in the order from ① to ③.

• Apply grease LEN317A to the bearing of each gear.

Apply grease to the roller.

LEN317A

SPROCKET, FILM ADVANCE SW, REWIND SW UNIT, SHUTTER, DX CONTACTS

- Contact of film advance SW should be on the pin #166 of motor rotation reducing unit correctly.
- Do not bend the contacts of film advance SW.

FAA24051 – R.3282.A

SOLDERING BLACK WIRE OF FILM ADVANCE SW

Twist wires (X8) to be soldered to

SOLDERING BLACK WIRE OF FILM ADVANCE SW

Twist wires ($\times 8$) to be soldered to FPC twice counter-clockwise.

ARRANGEMENT OF WIRES OF FILM REWIND SW BASE PLATE

LOWER FILM ADVANCING MECHANISM UNIT, REFERENCE SHAFT DISK,
FILM REWIND FORK, UPPER FILM ADVANCING UNIT

Note: More detail for assembling, refer to from next page.

Apply dew protection sponge #236 on the screws as much as it covers half of them.

LOWER FILM ADVANCING MECHANISM UNIT ASSEMBLING POSITION

Rear side of lower film advancing mechanism unit

① Align bent portion of #102 and mark.

② Align hole of #60 to sideways of reference shaft.

③ Set bent portion of #102 to hole of #60 as shown in the picture.

ASSEMBLING REFERENCE SHAFT DISK

Put shutter charge lever of film advance rotation reducing base plate toward the lens mount side (the most forward position).
(Use tool J15287: a manual film advance tool.)

Mounting position

After mounting, the position of upper film advancing unit should be aligned at the position as shown in the picture below.

ROUTING UPPER FILM ADVANCING UNIT

- Position of reference shaft disk.

- Upper film advancing unit setting position.
 - ① Position of film advance clutch is shown in the picture.
 - ② Film advance stopper lever is positioned at the hollow position.

Install position of sprocket shaft is as shown in the following.

Sprocket tooth position: $27.7^{+0.3}_{-0.4}$ mm

- Fasten screws in the order from ① to ③.

Through wire inside post of lower film advance mechanism unit.

- After having finished mounting, insert a washer #65, and an E-ring #773 at the low end of sprocket shaft.
- Thread position of sprocket is as shown in the following figure.

Good

No good

Film advance side →

CHECKING THE MOVEMENT OF MIRROR DRIVING LEVER AND
SHUTTER CHARGE LEVER

- ① Turn the manual film advance tool J15287 counter-clockwise as far as it stops. Both levers should be at the lens mount side as shown in the picture.

- ② Turn the manual film advance tool J15287 clockwise so that shutter charge lever only comes to the front most position at the lens mount side. And mirror driving lever is as shown in the picture.
- ③ Remove the tool.

2. FRONT PLATE

AF S/C SW

Attaching position of #952

LENS CONTACT, f-fo PCB

Height of solder for soldering
lens contact FPCPass wires of f-fo PCB
through the hole of front plate
to the inside.

LENS RELEASE BUTTON

AF DRIVING UNIT

- Adjust the gap in the horizontal direction of mirror with #460. The gap should be as small as 0.1mm.
- Mirror should move smoothly when moving the mirror up and down manually.
- Secure the gap between I & L base plates with #320 and remain as it is until main FPC is mounted.
- Fasten screws #753×2 in the order from ① to ②.

APRON, BAYONET MOUNT

Fasten screws #739×4 and #740 at the mount in the order from ① to ⑤.

* Take care not to fasten too tight the screw #733.

SPRING HOOKING POSITION, OILING PORTION, APERTURE LEVER POSITION AND MIRROR SW

● ■: Apply gease to slanting line portions.

● Adjust the height of aperture lever to 3.4 ± 0.1 mm by turning eccentric pin for aperture lever adjustment.

Tool: J18004

● Adjust the eccentric pin for mirror SW adjustment so that the mirror SW goes ON at the position where mirror comes between 0 and half of the thickness of mirror holding sponge, while pushing the mirror up vertical lever toward the direction indicated by arrow.

INSPECTION OF AF-RELATED SW

	C	S	M	Push lens release button.
AF A/M SW	ON	ON	OFF	ON (C or S mode) → OFF
AF S/C SW	ON	OFF	OFF	-----

Front diecast is grounded.

INSPECTION OF AF DRIVING UNIT OPERATION

Apply 6 [V] power to the AF motor and check to see if operation is normal or if there is noise in the gears.

Check also to see if operation is normal when the AF motor rotates in normal or reverse direction.

HEIGHT ADJUSTMENT OF AF COUPLING PIN #911

- Adjust the height of AF coupling pin #911 with a screw #760.
- Push the lens release button two or three times, and measure the height with slide calipers.
- The height of AF coupling pin #911 should be under the surface of lens mount surface when the height of lens release pin is set to 0.4mm. If the pin #911 is over the mount surface, adjust it by 1.6mm in the minus direction.

APERTURE CONTROL UNIT, MIRROR BOX BOTTOM PLATE

- Apply Sealglow at the foot of TTL SPD.
- Pull out wires ($\times 2$) through the gap between L base plate and AF motor to the film rewind side.

ADJUSTMENT OF APERTURE CONTROL Mg RESET POSITION

PENTA PRISM, SCREEN

Painting edges triangle
with black paint.
(width is less than 0.5mm)

• Refer to page A34 to see
how to mount AE SPD
#1027.

• As for G3, the fresnel
surface down.

PRISM BOX

ADJUSTMENT OF ANGLE (45°) OF MAIN MIRROR

- ① Remove focusing screen.
- ② Set the tool J18197 in place of the prism or the focusing screen.
- ③ Attach optical parallel J18037 on the lens mount.
- ④ Measure the angle by your eye-estimation using an Auto Collimator.

Standard value

- Horizontal error: Within $\pm 20'$
 - Vertical error: Within $\pm 5'$
 - Distortion: Within $\pm 8'$
- ⑤ If horizontal error is found, adjust the error by moving B413 up and down.

- ⑥ If vertical error is found, adjust it by rotating the eccentric pin in the mirror box with a hex key.
- ⑦ Check the accuracy by moving the mirror several times with your finger.
If it is out of the allowable range, repeat steps ⑤ to ⑦.

Reference: Viewfield of collimator J19002 is approx. $40'$.

ADJUSTMENT OF ANGLE (45°) OF SUB MIRROR

- ① Return the screen G3 back to the original position.
- ② Set the tool J18196 for determining the sub-mirror angle of 45° on the lens mount correctly.
- ③ Measure the angle by your eye-estimation using an Auto Collimator.

Standard vertical error: Within $\pm 10'$

- ④ If there is vertical error, adjust it by rotating the eccentric pin for sub-mirror in the mirror box.

Note: Horizontal error cannot be adjusted.

- ⑤ Check the accuracy by moving the mirror with your finger several times.
If it is out of the range, repeat the procedures ③ to ⑤.

ADJUSTMENT OF INFINITY (∞)

Use a reference lens J18010 and adjust the washers #781 \times 4 so that the infinity (∞) comes within the range of ± 0.05 . After the completion of the body assembly, the accuracy of mirror angle (45°) is in error when the infinity is adjusted. But it is possible to adjust the accuracy if the infinity is within the range of ± 0.05 .

AF FPC, MAIN FPC, LIGHT BAFFLE PLATE

Note: More detail for assembling, refer to from next page.

- Remove IL supporting plate #320 to attach main FPC.
- Apply Sealgrow at the foot of AE SPD.
- Fasten screws #738×3 approx. 9 turns.

BENDING OF MAIN FPC

-  : Double coated adhesive tape
- Fold the portions indicated by numbers ① to ⑪ with a rod $\phi 1.5$ to ensure they stay bend.
- Fold the portions indicated by letters A to E with your fingers.
- Align screw holes when bonding the portions indicated by letters A and B.
- Do not fold the above mentioned portions clearly as shown below.

Good

No good

SOLDERING OF WIRES TO AF FPC AND MAIN FPC

LIFHT BAFFLE PLATE

Paste light baffle plate on the top end portion to which mirror holder does not attach when the mirror moves up and down.

Target of pasting position "A" is a little down from "B" that of #435. (Approx. 0.2mm down)

3. ASSEMBLING OF FRONT PLATE AND REAR BODY

ALIGNING FRONT PLATE AND REAR BODY

Note: More detail for assembling, refer to from next page.

Arrangement of wires

Arrange wires attached to the front plate and the rear body with care not to pinch them.

• Aperture Mg ×2	• Shutter wires ×5
• Aperture PI ×4	• Film advance completion SW ×1
• Mirror SW ×2	• Film detection, film advance, film rewind SW (one each)
• TTL SPD ×2	• GND black wires ×2
• f - fo ×3	• Film advance motor ×2
• AF S/C SW ×1	• AF motor ×2
• AF A/M SW ×1	• AF PI ×4

} Already soldered.

- Push vertical lever with tweezers to set the shutter set lever to the lens mount side.
- Shutter charge lever on the body side should be on the lens mount side.

Mounting position

- Mount the shutter set lever on the shutter charge lever of the body side.

- Push the shutter lever lightly and place the shutter set lever over it.

Push the front plate toward lower right and fasten screws in the order from ① to ⑥.

CONFIRMATION OF ALIGNING OF FRONT PLATE AND REAR BODY

Position a manual film advance tool J15287.

- The mirror must move up when the tool is turned counter-clockwise.
- The mirror and the shutter curtain must move down when the tool is turned clockwise.

SOLDERING AT EACH PART

Solder following 6 portions:

1. Between main FPC and DX FPC
2. Between main FPC and SPD SPD
3. Between main FPC and lens contact FPC
4. Between main FPC and command dial brush
5. Between main FPC and DC/DC converter
6. Between main FPC, DC/DC converter and battery contacts

Soldering wires ($\times 27$) at four portions

1. Front

■ : Apply Sealgrow

2. Top of penta prism

Paste adhesive tape on the portion as shown in the picture below after arranging wires.

3. Top of hand grip

4. Black wire of rug plate at hand grip side

CAMERA BACK OPEN/CLOSE COVER PLATE TOP COVER

Note: More detail for assembling, refer to from next page.

SOLDERING PORTION OF TOP COVER WIRES

Notes on assembling top cover:

- ① Clean contacts and patterns.
- ② Clean dust and particle from external LCD.
- ③ Move the AE lock lever to the right.
- ④ Arrange wires (to prevent wires from pinching).
- ⑤ Set the eyepiece frame #431 first, then mount the top cover.
- ⑥ Paste adhesive tapes #676×2 to cover the whole soldered portions (to avoid short-circuit between soldered portions and top cover).

REWIND BASE PLATE

#268 is a strong double coated adhesive tape for securing the main condenser #1033.

INSPECTION AND ADJUSTMENT OF BODY BACK

Measure from the lens mount surface to the external film guide rail.

Standard value: $46.67 \pm 0.02\text{mm}$

Parallelism: Within 0.02mm

If the value is out of the standard range, adjust the distance by inserting a washer under the lens mount or use attaching screws #855×2 and #846 of the film rewind base plate. (Unfasten screws and move the front plate back and forth.)

INSPECTION AND ADJUSTMENT OF INFINITY (∞)

Use reference lens J18010 and collimator J19001.

Standard value: ± 0.03 calibration

If the value is out of the standard range, adjust the value by rotating the main mirror stopper in the mirror box using a hex key. When making inspection, operate the main mirror a few times with your finger.

FLASH BASE UNIT, HAND GRIP

SOLDERING PORTION OF FLASH BASE UNIT

INSPECTION AND ADJUSTMENT OF AE ACCURACY
--

- Operation should be performed according to the instructions as shown on the computer.
- Use a floppy disk (J18217A or J18217B) for inspection and adjustment.

Inspection and adjustment items

1. Adjustment of $f - f_0$
 2. Inspection and adjustment of AE- γ , AE level (A mode)
 3. Inspection and adjustment of aperture control (S mode)
 4. Inspection and adjustment of M 1/2000 sec. (M mode)
 5. Inspection and adjustment of TTL- γ , TTL level (TTL mode)
- * Perform the above five items in order when replacing main FPC.

Others

1. Return the camera after fully deleting the sequence error records.
2. Run the "Check sum" program when data in the EEPROM has been changed separately.
3. Set options to standard settings unless otherwise requested by customers.

INSPECTION AND ADJUSTMENT OF AF ACCURACY
--

- Operation should be performed according to the instructions as shown on the computer.
1. When AF FPC is replaced or disassembled.
CCD output \rightarrow YAW \rightarrow Pitch \rightarrow $\Delta Z \rightarrow$ Hard AGC
 2. CCD output (adjusted data)
 3. Checking of AF accuracy

CAMERA BACK

BOTTOM COVER

INSPECTION AND CLEANING OF EACH PORTION

Refer to the standard value of inspection.

[1] Inspection standards

	Item	Judgement standards	Remarks
Shooting	Separation between frames	$2 \pm 1 \text{ mm}$. Center of separation should not coincide with a perforation.	Vernier caliper scale
	Vertical difference	0.4mm (max.) in vertical direction.	Film
	General light leakage	Practically no light leakage at 400,000 lux min. (over 40,000 lux x time) (ISO 400).	Light leakage tester
	Light leakage between shutter curtains	Practically no light leakage at 200,000 lux min. (over 100,000 lux x time).	Sun light.
Viewfinder	Diopter	Viewfinder image: $-1 \pm 0.3 \text{ dpt}$ Display inside viewfinder: $-1.1 \pm 0.3 \text{ dpt}$	Dioptric tester
	Viewfield ratio	$92 \pm 1 \%$	
	Infinity (∞)	$0 \pm 30''$	
	Apparent resolution	20 lines/mm or more at center, 10 lines/mm or more at contour	
Shutter accuracy	Allowance difference	P, PM, A mode $1/2000 - 1/250 : \pm 0.65 \text{ TV}$ $1/125 - 30'' : \pm 0.5 \text{ TV}$ M, S mode $1/2000 - 1/125 : \pm 0.45 \text{ TV}$ $1/60 - 30'' : \pm 0.3 \text{ TV}$	Shutter tester
	Shutter curtain speed	Less than 7ms for both front and rear curtains.	
	Voltage condition	Meets the standard values at the power voltage between 4.5V and 6V.	
Exposure accuracy	Exposure value	P, PM, A, S mode $1/1000 - 1/2000 : \pm 0.65 \text{ EV}$ $30'' - 1/500 : \pm 0.5 \text{ EV}$	Shutter tester
	Aperture control	P, PM, S mode $f/5.6 : 0 \pm 0.3 \text{ AV}$ Other than $f/5.6 : 0 \pm 0.5 \text{ AV}$	

	Item	Judgement standards	Remarks
Bracketing shooting	Exposure	Changing from underexposure to over-exposure.	Shutter tester
	Method of compensation	P, PM, mode Follow program charts S mode Compensate aperture value A mode Compensate shutter speed M mode Do not compensate, though setting is possible. When dedicated flash is mounted, compensate TTL flash output level.	Flash meter
Sync contact	Insulation resistance	30M ohms (min.) at DC 500V	Insulation resistance meter
	Contact efficiency	50% (min.) at both 1ms and 2.5ms	Contact efficiency meter
	Flash fires after shutter is fully opened.	Pront-curtain sync: 0.4ms (min.) Rear-curtain sync: 3.5 to 7.1ms (at 1/60 sec.)	Shutter tester
	Time period which shutter stays fully open after flash fires.	Pront-curtain sync: 1.8ms (min.) Rear-curtain sync: 2 to 5.5ms (at 1/60 sec.)	
Built-in flash	G, N.	13+2.5, -2.1 (± 0.5 EV): 1n to sec. or more after recharging. 10 (min.): Immediately after recharging	Flash meter. At 2m distance. Standard reflector board.
	Flash orientation characteristics	Covers 28mm lens view. Within 1EV at 26.5° (tilting) and 35° (swing)	
	Recycling time	Within 3 sec. (at full power, 5 times consecutively, using fresh battery.)	Battery
	No. of firings	200 times or more (recycling time: 4 sec.) 250 times or more (recycling time: 10 sec.) Measured at full power with 20 sec. interval	Clock
	Pop-up button stroke and pressure	Stroke: 0.8 to 1.4mm Pressure: 90 to 160g	Dial gauge Bar-type pressure gauge
	Height of flash when it is released	76.6 \pm 1.5mm: From center of optical axis to the top of flash case.	Scale

	Item	Judgement standards	Remarks
TTL mode	Exposure value	0.1 lux S \pm 0.4EV (at ISO 100, 2m, f/5.6) \pm 1EV (at other combinations)	Flash meter Fuji HR100 film Standard reflecting paper (25%)
Mount	Lens release	Easy and positive lens release	Bar-type pressure gauge
	Pressure of lens release button,	750g (max.) at the position to which lens release pin is depressed to the mount surface.	
	Projection of lens release button	1.4 + 0.05, - 0.1mm from bayonet surface.	Vernier caliper scale
	Pressure of lens release pin	750g (max.)	
	Height of AP coupling pin	1.6 \pm 0.1mm	
AP	Adjustment accuracy	Yaw: 0 \pm 6m rad Pitch: 0 \pm 6m rad Z: 0 \pm 30 μ m	Personal computer and other tools SB-24, etc.
	AP illuminator	AP illuminator lights up at EV2 or lower.	
AB lock lever	Movement	Lock lever moves smoothly.	Bar-type pressure gauge
	Pressure (ON)	60 to 150g	
	Stroke (ON)	1 \pm 0.5mm	Vernier caliper scale
	Total stroke	2 \pm 0.5mm	
Aperture coupling ring	$\theta 1$	52° $\begin{smallmatrix} +0^{\circ} \\ -1^{\circ} \end{smallmatrix}$	Angle gauge
	$\theta 2$	113.5° (min.)	
Main switch	Click perssure	500 $\begin{smallmatrix} +150 \\ -200 \end{smallmatrix}$ g	Bar-type pressure gauge
Command dial	Click release torque	230 \pm 50g \cdot cm	Torque meter
Shutter release button	Movement	Shutter release button moves smoothly.	Bar-type pressure gauge
	Switch ON tension	Shutter pre-release switch: 30 to 100g Shutter release switch: 230 to 330g	
	Switch ON stroke	Shutter pre-release switch: 0.5 \pm 0.1mm from the top of shutter release. Shutter release switch: 0.5 \pm 0.1mm from the pre-release switch turns on.	Dial gauge
	Total stroke	1.25mm (min.)	

FAA24051-R. 3282. A

	Item	Judgement standards	Remarks
Rubber switch	Film rewind side	Switch ON pressure: $150 \pm 50\text{g}$ Switch ON stroke: $0.6 \pm 0.2\text{mm}$	Bar-type pressure gauge
	Film advance side	Switch ON pressure: $200 \pm 60\text{g}$ Switch ON stroke: $0.6 \pm 0.2\text{mm}$	
Aperture coupling lever	Height from optical axis	$3.4 \pm 0.1\text{mm}$	Dedicated gauge AP55 or AP105 0 AP50 f/1.8
	Horizontal position from optical axis	$18.7 + 0.35, -0.3\text{mm}$	
	Operating stroke	7.4mm (min.)	
	Operating time	55 to 75ms: From shutter release switch is ON to completion of stopping down. 30ms: From the position stopped to completion of stopping-down. 70 to 90ms: From starting aperture lever to starting of front curtain.	
Mirror	Movement	Make sure that mirror comes into contact with stopper pin.	800mm lens
	Bound	No shadow appears on the film.	
Camera back	Opening pressure	Press slide lever: 350 to 1000g.	Bar-type pressure gauge
	Closing pressure	Press left side of film cartridge confirmation window: 900 to 1800g	
	Height of sprocket holding intercept	$4.8 + 0.3, -0.1\text{mm}$ from mounting surface.	Vernier caliper scale
	Pressure of pressure plate	350 to 600g at the center of film plane.	
	Flatness of pressure plate	0.02mm (max.) within the range of film plane.	
Camera back switch	ON-OFF position	Position where camera back is opened by $7 \pm 3\text{mm}$ from lock cover.	Vernier caliper scale
	Lever pressing pressure	6g (min.)	Bar-type pressure gauge
DX contact	Contacting portion	Does not scratch the film cartridge.	Dial gauge Bar-type pressure gauge
	Height of contact	$1.5 \pm 0.15\text{mm}$	
	Contact pressure	15g (min.) at initial position. $70 \pm 7\text{g}$ measured at film cartridge surface.	

	Item	Judgement standards	Remarks
Film detection switch	Height	$1.95 \pm 0.2\text{mm}$	Dial gauge
	ON-OFF position	1 to 1.5mm from inside surface of film guide rails	
	Pin pressure	10g (min.) at 1mm distance from inside film guide rails.	Bar-type pressure gauge
	Clearance of pin	$0.3 \pm 0.2\text{mm}$	
Sprocket	Position	$27.7 + 0.8, -0.4\text{mm}$: From the end of aperture to the end of right sprocket.	Dedicated gauge
	Clearance	0.8mm (max.)	
Spool	Friction	Static torque: $220 \pm 50\text{g.cm}$ Dynamic torque: 120g.cm (min.)	Bar-type pressure gauge
	Movement	No rotation fluctuation	
Film rewind set lever	Lever release sliding distance	1 to 1.5mm	Vernier caliper scale
	Sliding tension	50 to 150g	Bar-type pressure gauge
Film rewind button	Movement	It cannot be pressed unless sliding the film rewind set lever.	
	Height	$3.65 \pm 0.3\text{mm}$	Vernier caliper scale
	Setting position	1.5 to 2mm from top of the button.	
	ON position	$2.5 \pm 0.5\text{mm}$ from top of the button.	Bar-type pressure gauge
	ON tension	1500g (max.)	
Film rewind fork	Movement	The fork rotates smoothly and lightly.	
Batter chamber	Contact spring tension	Place the battery on the hook of the battery chamber and press. 550g (min.) at initial movement.	Battery Bar-type pressure gauge
Batter chamber lid	Opening tension	$310 \pm 50\text{g}$ (without battery)	Bar-type pressure gauge
	Releasing tension	Can be released at 1kg (min.) Shaft cannot be broken.	
Accessory shoe	Dimensions	Based on JIS-B7101	
	Gap	None	
	Bend	$0 \pm 1^\circ$	Viewed by naked eyes
	Step between contact and mold	Lower than 0.2 to 0.3mm (sync contact) Lower than $0.2 \pm 0.05\text{mm}$ (others)	Dial gauge
Tripod bush	Dimensions	Based on JIS-B7103	
	Mounting	No gaps	

FAA24051-R. 3282. A

	Item	Judgement standards	Remarks
Self-timer window	Attaching tension	Press the window with a bar-type pressure gauge. It cannot be peeled off at 1kg (max.)	Bar-type pressure gauge
LCD panel	Attaching tension	Press the panel with a bar-type pressure gauge. It cannot be peeled off at 2kg (max.)	Bar-type pressure gauge
Power source timer	After turning shutter pre-release switch OFF.	8 seconds	Clock
	After each operation	2 seconds, but 6 seconds while end of the film, Err is displaying and brackting.	
Battery check	8 sec. hold	4.8V (min.)	Clock
	0 sec. hold	4.8 to 4.5V	Regulated DC power source
	Shutter release lock	4.5V (or lower)	Digital multi-meter
Current consumption	Current value	20 μ A (max.) when main switch is OFF. 400 μ A (max.) when main switch is off and power timer is OFF. 240mA (max.) when metering.	Regulated DC power source. 5.6V, 0.8 ohms Digital multi-meter
Data back	Data imprinting	No over or under intensity of imprint. Check by actual shooting.	Film
	Pressure of pressure plate	350 to 700g at center of the frame.	Bar-type pressure gauge
	Flatness of pressure plate	Less than 0.02mm within the frame.	
	Others: opeing/closing pressure	Usually corresponding to the judgement standard described on camera back.	

Item		Judgement standards		Remarks	
Durability of each part (reference)					
Item	No. of times	Item	No. of times	Item	No. of times
Shutter	30000	Self-timer (☺)/Rear-curtain sync button (⚡)	600	Flash set/release operation	1000
Shutter release switch	30000	Shift button (□)	1500	Flash firing	1500
Power switch	2500	Exposure compensation button (Ⓜ)	300	Film cartridge loading	1500
Command dial (1/3 turns)	6000	AE lock lever	600	Eyepiece correction lens set/release operation	30
